

# **ADORE Update Version 5.24**

**Release Date: March 1, 2006**

This update is a temporary fix to version 5.23 to accomplish the following:

1. The quasi-static output is modified to make it more compatible with earlier versions of ADORE. The modifications basically resulted in adding more variables to the output list.
2. Rectified problem in computing stiffness for cylindrical roller bearings. The modifications consists of elimination of axial stiffness loop and setting symmetrical load distribution solutions.
